CHARLES BABBAGE

26th December, 1791 - 18th October, 1871

Charles Babbage invented the primary computer within the year 1822.

He was an English Mathematician who first conceived the thought of an electronic computer.

What is a Computer?

The computer is an electronic device used to store information and process it. It is a machine that can accept data, process it, and produce output. It is a machine that can perform a wide range of tasks, from simple calculations to complex data processing.

Back to the Future
